

# Hybrid Beer Cooling Solution

Benefits of glycol and ice bank tech in one efficient solution

- Serve beers as low as  $-1^{\circ}\text{C}$  from ambient  $28^{\circ}\text{C}$  keg
- Possible to freeze beer font
- New fluid forms ice bank at  $-2^{\circ}\text{C}$
- Quick drain feature (no siphoning)

Pair a Bracton Eco Chiller and CoolTube together with a beer font and you have a super beer chilling system. Ideal for smaller bars, where sub zero beers or frozen beer towers are desired without the cost of deploying a more expensive glycol system.
